## PREFACE

This volume of philosophy, combining essays, dialogues and aphorisms, goes way beyond the scope of my earlier philosophical works in outlining what I consider to be the logical stages of evolution beyond man which will have to be passed through before definitive salvation can be achieved in a transcendental goal of evolution ... analogous to Teilhard de Chardin's Omega Point. One could say that I have attempted to concretize Nietzschean notions concerning 'man's overcoming' ... in respect of specific post-human stages. Hitherto, when I wrote about more advanced stages of life, it was generally within the scope and definition of man, as with Huxley or other humanistic and basically Western thinkers. Here, by contrast, the attainment to a more artificial stage of evolution is, *ipso facto*, chronologically *beyond* man and thus implicitly post-human. Such was the revolutionary break with my earlier thinking, not to mention mentors, which occurred early in 1982, and it is, I believe, of momentous significance! Henceforth my philosophical task was largely to be a refinement upon and modification of contentions outlined here. Obviously, in the many years that have passed since then, several changes, some of them quite drastic, have occurred in my overall perspective. But the real beginnings of my mature philosophical oeuvre are here, in *Future Transformations*, and it was from this time onwards that I began to grow into what I like to think of as a sort of messianic self-awareness.

John O'Loughlin, London 1982 (Revised 2008)

# CONTENTS

## INTRODUCTION

1. Future Transformations (essay)
2. Irish and English (essay)
3. A Feasing Paradox (essay)
4. Millennial Thoughts (essay)
5. Post-Dualistic Sexuality (essay)
6. Towards a True Equality (essay)
7. Concerning Transcendentalism (essay)
8. Musical Transformations (essay)
9. Safeguarding Freedom (essay)
10. Protons and Electrons (essay)
11. Two Kinds of Dependence (essay)
12. Materialists and Spiritualists (essay)
13. A Changing World (dialogue)
14. Proletarian Writing (dialogue)
15. The Evolution of Art (dialogue)
16. From the Alpha Absolute(s) to the Omega Absolute (dialogue)
17. From the Apparent to the Essential (dialogue)
18. Transformation Points (dialogue)
19. A Fundamental Dichotomy (dialogue)
20. The New Subjectivity (dialogue)
21. Aphoristic Appendix

## INTRODUCTION

If there is such a thing as a truth that is too pure for certain people, less psychically evolved, to take, then may we not suppose this situation may extend to an entire work, an entire book, in which undiluted truths are the creative norm. Such books haven't, admittedly, been too plentiful in the past; for we are only now beginning to live in a purely truthful age. Nevertheless books with diluted truths, proportionate to the degree of evolution manifest in the writer and his society at any given time, have caused similar problems for people who weren't 'up to' the level of 'truth' therein recorded. In this respect, such a book becomes akin to the Hindu metaphor of the Clear Light of the Void, which is too pure for the egocentric mind to abide with, inevitably resulting in its return to the world in some other flesh, as part of the recurrent process of reincarnation, until such time as, become more evolved, it can abide with the Absolute and thus escape the cycle of rebirths.

Returning to factual reality, this means that the evolution of human life on earth proceeds by degrees and that, strictly speaking, one can't 'gate-crash' the Divine. One must earn the right to become an integral part of the Supreme Being, and one can only do this by improving the quality of life over the generations, from century to century.

Likewise one must earn the right to properly appreciate a certain type of truthful book, which necessarily remains a 'closed shop' to those who are insufficiently intellectually or morally evolved to do so. As, in occult mythology, Count Dracula shies away from the Cross, symbolic of Truth and Goodness, and, in religious mythology, the egocentric mind shies away from the Clear Light, so, on the intellectual plane, the reactionary or traditional mind shies away from such revolutionary truths as are expressed in the foremost books, usually philosophical, of the age. A man who cannot 'take' such truths ... inevitably passes negative judgement on himself, and reverts, in all probability, to fiction or perhaps even to poetry.

The great writer and thinker is thus in the position of being a kind of intellectual Supreme Being on earth, to whom many are drawn but with whom only comparatively few can abide. The majority shy away from his stronger grasp of truth from fear that it will disrupt their particular psychic or intellectual integrity, causing them to extensively revise or even change their position. Perhaps it will be only after several generations that the majority of men can come to abide and understand his truth. In the meantime, he remains a kind of lone beacon, shining in the vanguard of psychic evolution, revered by some, but feared and even hated by many.

I like to see myself as such a writer, and I know that not all men can come to me at present and wholeheartedly acquiesce in what I write. Nevertheless I live in the hope that, eventually, most men will come to me if they are to grasp the prerequisites of salvation, and thereby set themselves on the right road for the only reasonable evolutionary goal. For, unless they abide with the driving light of my truth, they will continue to flounder in the comparative darkness of pedestrian illusions, shut out from the promise of Eternity.

John O'Loughlin, London 1982 (Revised 2008).

## FUTURE TRANSFORMATIONS (Or an attempt to outline a post-human future)

Transcendental meditation wouldn't suffice to take man to the heavenly Beyond ... of the Omega Absolute, but it would certainly suffice to take him to the post-human Beyond ... of the Superman. For the Superman is the evolutionary development immediately above man, towards which transcendental men are advancing.

With the decline of egocentric religion, the post-egocentric religion of Transcendentalism becomes the final form religion will take in the evolutionary history of man. Instead of praying and singing hymns, like Christians did, the Transcendentalists of the centuries ahead will directly cultivate their spirit through the medium of transcendental meditation. They will learn to meditate and regularly practise meditation in suitably-designed meditation centres, the institutional successors to churches. Praying, singing, chanting, etc. will have no appeal to them whatsoever. Only the expansion of the superconscious through meditation will be relevant to them, and this they will prefer to do communally - as part of a large gathering of fellow Transcendentalists.

Man in his third stage of evolutionary development (the stage beyond paganism and Christianity) will be succeeded, however, by the Superman, that is to say, by a brain artificially supported and sustained, with possible access to artificial hearing, seeing, and speaking devices, subject to external control. The Supermen - for there should be many such brains in existence - will be clustered together in tree-like formations, their brains being sustained and supported from a central energy source. There will be numerous tree-like clusters of this nature in existence throughout the world, and they will each signify a life form antithetical, in essence, to animals, particularly with reference to such tree-climbing, tree-inhabiting animals as apes. The 'tree' in question will be artificial, but the brains being supported on it will be natural and capable of self-identification. Each brain will be a separate Superman, and all Supermen will be resigned to a communal life, just as apes are resigned to such a life in the crowded branches of the trees they inhabit. The great antithetical difference, however, between these two life forms will be that whereas apes are resigned to a sensual communality, the Supermen will partake of a spiritual communality, and this spiritual life will constitute the first phase of the post-human Millennium, being conditioned and encouraged by the regular intake of suitably-regulated doses of LSD, or some equivalent synthetic upward self-transcending, vision-inducing stimulant, which will be externally administered to the artificially-supported brains by the future equivalent of priests - the

superpriestly spiritual leaders, so to speak, of the Millennium in question.

Meditation, then, will terminate with the termination of man, to be superseded by the visionary contemplation, revealed through LSD-type hallucinogens, of the Superman. Meditation is fundamentally too naturalistic to be wholly compatible with an advanced spirituality in a more sophisticated evolutionary context. As evolution progresses, so the lifestyles of its participants become increasingly artificial, subject to the substitution of synthetic for natural products and experiences. A being freed, so to speak, from the natural body wouldn't be qualified to practise yoga, with its complicated posturings, and neither would he be able to regulate the flow of oxygen to his brain through the manipulation of various breathing techniques designed to facilitate increased awareness. Rather, oxygen would have to be fed to him artificially, through the medium of special containers, and its flow regulated according to uniform standards of intake acceptable to the brain commune as a whole. It would pass into the blood vessels of the various brains, where it would be converted into corpuscles and suitably exploited in the interests of proper brain functioning. There could be no question of a natural respiratory system being in use at that point in time, for the lungs would have 'gone the way' of the rest of the body, left behind with the creature known as man. And, of course, an artificial pump, replacing the human heart, would serve the brain commune by maintaining a uniform flow of blood through such artificial vessels as were deemed necessary to link the pump to the natural blood vessels of the individual brains. The Supermen would never experience the human failing of heart attacks but, at worst, only a temporary mechanical failure of the artificial pump which, hopefully, could be quickly repaired - assuming, for argument's sake, it were to break down in the first place!

The introduction of hallucinogens like LSD into the Supermen's brains would, of course, have to be through the blood, so we may surmise that the future equivalent of priests will inject the desired quantities of them into the artificial blood vessels at salient, predetermined points in the sustain apparatus, thereby guaranteeing each Superman a uniform, carefully-regulated dose of the benevolent, mind-expanding synthetic stimulant, which would be designed to take over from where television and/or meditation had left off. What follows would be a sustained period of gentle acclimatization to its vision-inducing properties, as the Supermen contemplated the jewel-like crystalline images of their turned-on superconscious. With the termination of 'the trip', which would probably occur after several hours, the Supermen would be left to sink into their subconscious minds and either doze or sleep, in the interests of psychic integrity. The following

day, however, they would be given another 'trip', and so on, until, with a gradual increase of the dosage to peak levels, they became spiritually ripe for the next evolutionary transformation - namely from Supermen to Superbeings.

Before I go on to discuss Superbeings, a word or two must be said about man and his future transformation into Superman. The average transcendental man of the late-twentieth century is rather like an embryonic superman, and, to be sure, there are already people living a life which approximates to the one just outlined and therefore intimates of it. At the time of writing, I happen to reside next to a couple whom I understand to be unemployed. They rarely go out during the day and hardly ever at night. As a rule, they spend their mornings in bed and their afternoons either listening to the radio or watching television. At night they invariably sit in front of their television for several hours. Now, for me, a quite conscientious intellectual, their lifestyle appeals to my critical sense and generally causes me to feel somewhat indignant and even censorious. What right have they, I ask myself, to spend their days either lying in bed or watching television when I, compelled by a sense of duty, spend 5-6 hours a day at my writings, with from 1-2 hours study every evening? Clearly, my moral sense is offended and I feel tempted to preach to them on the virtue of work, irrespective of whether or not there may be any work available to such people under the present economic climate. And yet my attitude - by no means untypical of people like me - is really quite beside-the-point and hopelessly one-sided. I regard my television-addicted neighbours from a reactionary point-of-view, quite overlooking the more relevant progressive one which, even if they personally aren't directly aware of it, is at least applicable to the trend of evolution towards the Superman. Now since transcendental man is pre-eminently a proletarian phenomenon, and since the proletariat tend, on the whole, to watch more television than the bourgeoisie, I must make some attempt, if I'm to do proper justice to this phenomenon, to view my neighbours' behaviour in the light of contemporary transcendentalism and thus equate their lifestyle, no matter how alien it may be to myself, with a proletarian spirituality that is a prelude to the visionary lifestyle of the Superman. For, viewed in this light, the hours my neighbours spend in front of their colour television correspond, on a lower external level, to the hours the Supermen will spend contemplating the luminous contents of their superconscious minds, as induced by the higher internal stimulant of LSD. And, of course, the hours they spend in bed, both before and after television, will correspond to the rest-periods which the Supermen will require to safeguard their psychic integrity, following the visionary exigencies of their respective 'trips'. My neighbours are therefore

resting, each night, from their television experiences of the previous day, while preparing themselves, throughout the morning, for the afternoon and evening viewing to-come. They are the Supermen in embryo, and allow me to add, at the risk of scandalizing middle-class sensibilities, that they are by no means untypical of their class! Perhaps they are just a shade more radical or thoroughgoing than those who, largely because of job commitments, are obliged to confine their TV-viewing to the evenings and weekends.... Which just goes to show that one should be wary of looking at unemployment solely from a socio-economic point of view, quite overlooking the spiritual or modernist dimensions which accrue to it and would seem to be compatible with the unofficial development of transcendentalism in a civilization which, in regard to the bourgeoisie, is becoming increasingly decadent.

Transcendental man is therefore clearly in evidence in the context of extensive television-viewing. Meditation, though undoubtedly relevant to his future development, isn't the only kind of spiritual stimulus, even if it is an inherently superior kind to television, by dint of the fact that it expands spirit directly, through internalizing the mind, rather than indirectly, through the medium of artificial appearances. Nevertheless the incentive provided by television for a mild degree of upward self-transcendence cannot be dismissed as irrelevant to spiritual development, but should be regarded as a prelude to higher things, the temperaments of some people probably being such that they could never come to fully appreciate the virtues of meditation anyway, given that such virtues tend, as a rule, to be appreciated only by a more sophisticated type of mind in the twentieth century, and not by what we may call the lumpen proletariat. If television succeeds in gradually leading the majority towards transcendental meditation, then it will have achieved more than at first meets the eye! It does at least condition people to sit still and remain intellectually passive for a number of hours, which is what meditation also does, albeit minus an external stimulus and therefore with an emphasis on one's own spiritual resources. But if the general proletariat are closer, in their dependence on visionary experience, to the future Supermen, then it could well be that the meditating elite of the present century are closer, in their self-containment, to the ensuing Superbeings, and will doubtless experience a higher degree of collective meditation, pending transcendence. But there is no reason why the proletariat shouldn't indulge in periodic bouts of meditation in due course, even if only as a supplement to their television-viewing. Towards the climax of the transcendental civilization the vast majority of people, of whatever temperament, should be indulging in a degree of meditation on a regular basis, pending their transformation into Supermen....
